DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 2-3, 11-12 and 21-22, drawn to a composition and a method for prevention and treatment of Alzheimer's disease comprising the formula (IA), classified in class 514, subclass 23.
- II. Claims 4-5, 13-14 and 23-24 drawn to a composition and a method treatment of Alzheimer's disease comprising the general formula (IB), classified in class 514, subclass 156.

Claims 1, 6-9, 10, 15-18, 19-20 and 25-28 link inventions of Groups I-II.

The restriction requirement among the linked inventions is subject to the nonallowance of the linking claims, 1, 6-9, 10, 15-18, 19-20 and 25-28. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Art Unit: 1623

Inventions I-II are unrelated to each other. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the inventions are separate and distinct each from the other because the compounds of Groups I and II differ by a significant structural feature, having different formula IA and IB, which are classified in different subclass of class 514. Given the fact that chemical compounds that are not similar in structure have different physical, chemical, biological and physiological properties or activities, the instant compounds are deemed to have different modes of operation, different functions, and different effects.

Moreover, the search for inventions of Groups I-II would place an undue burden on the Office because of their separate classification crossing class 514. It is noted that for example a reference to one heterocyclic compound of formula (IA) would not be a reference to another heterocyclic compound of formula (IB) under 35 U.S.C. 103(a).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Because the above restriction/election requirement is complex, a telephone call to applicant's agent to request an oral election was not made. See M.P.E.P Sec. 812.01.

Art Unit: 1623

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
